## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 4/13/2009 has been entered.

### ***Examiner's Amendment***

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Lee Stipina on 5/8/2009 and phone message on 5/14/2009.

The application has been amended as follows:

In claim 22, line three, change the word "pump" to "tank."

### ***Claim Rejections - 35 USC § 103***

The rejection of claims 2-3 and 22-23 under 35 U.S.C. 103(a) as being unpatentable over Kobayashi et al. (US 6,844,094) has been overcome by applicant's amendment to the claims.

***Allowable Subject Matter***

Claims 2 and 22-24 are allowed.

The following is an examiner's statement of reasons for allowance:

The instant claims are to a fuel cell system comprising a fuel cell having an anode, a cathode and an electrolyte film put therebetween; and a fuel supply unit that includes a tank and supplies liquid fuel to the anode.

In one embodiment, the fuel cell includes an exhaust flow path communicating with both the anode and the cathode; and a gas supply unit including a pump, the pump being linked with the exhaust flow path to apply negative pressure to the cathode so as to introduce gas containing oxidant to the cathode, wherein the pump applies negative pressure further to the anode via the exhaust flow path so as to supply the liquid fuel to the anode and wherein the pump is further connected to the fuel supply unit so as to give positive pressure to the tank and to supply the liquid fuel to the anode.

In a second embodiment, the fuel cell includes a gas supply unit including a pump including a suction port and a pressure port, the suction port being linked with the cathode and the anode so as to apply negative pressure to both the cathode and the anode wherein the pump is further connected to the fuel supply unit so as to give positive pressure to the tank and to supply the liquid fuel to the anode.

The prior art does not teach a fuel cell with a gas supply unit including a pump that is linked with the exhaust flow path to apply negative pressure to the cathode so as to introduce gas containing oxidant to the cathode, wherein the pump applies negative pressure further to the

Art Unit: 1795

anode via the exhaust flow path so as to supply the liquid fuel to the anode and wherein the pump is further connected to the fuel supply unit so as to give positive pressure to the tank and to supply the liquid fuel to the anode OR a pump including a suction port and a pressure port, the suction port being linked with the cathode and the anode so as to apply negative pressure to both the cathode and the anode wherein the pump is further connected to the fuel supply unit so as to give positive pressure to the tank and to supply the liquid fuel to the anode.

The most pertinent prior art has been made of record. For example, Kobayashi et al. (US 6,844,094) teaches a fuel cell system comprising a fuel cell having an anode, a cathode and an electrolyte film put there between; a fuel supply unit supplying fuel to the anode; and a gas supply unit having a pump, the pump giving negative pressure to the cathode so as to introduce gas containing oxidant to the cathode (see claims 1-12, col. 5, lines 30-end; col. 7, lines 1-30, col. 8, line 51.) The pump gives negative pressure to the fuel cell at both electrodes (see col. 6, lines 42-65.)

The reference does not teach an exhaust flow path communicating with both the anode and the cathode and that the pump supplies positive pressure to the fuel supply unit. Further, the reference does not teach the pump is further connected to the fuel supply unit so as to give positive pressure to the tank and to supply the liquid fuel to the anode.

Because the prior art does not disclose the claimed invention or provide teachings that would lead one of ordinary skill in the art at the time the invention was made to find the invention obvious over the prior art, the claims are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

Art Unit: 1795

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
